THE AI WEB COMPANY

AIWEB — the communications network for AI assistants.
Healthcare's digital front door.

La Terrance “Terry” French — Founder & CEO
Prosper HealthTech Accelerator — Spring 2027 application draft

THE PROBLEM

Patients now start their search for care inside AI assistants —
asking ChatGPT, Claude, and Gemini who to see and how to reach them.

Practices cannot be reached there. They guess instead:
agency retainers, listings managed channel by channel, phone tag, web forms,
and insurance directories so stale the industry calls them ghost networks.

Administrative bottlenecks are where patient access goes to die.

THE FOUNDER

One hospital. Four roles. All at the Audie L. Murphy VA Hospital, San Antonio.

Biology, pre-med track — healthcare was the first direction.
2016–2017 — Patient Escort, Nursing Services: the human front door.
1,200+ hours — volunteer, same hospital.
2017–2020 — Founder, Seibertronics: healthcare IT, federal contract, same hospital.

U.S. Army Signal Corps (25U). Twenty years in IT.
He has worked the access problem on foot. Now he is building it in software.

THE PRODUCT

AIWEB gives every organization a public page assistants can find — its number — and a mailbox anyone can reach from inside the chat.

Find — the practice appears in ChatGPT, Claude, and the open web.
Call — the patient messages the practice directly. Nothing to install.
Mail — the practice answers from one inbox. One thread, with a receipt.

Live today: AIWEB Call is an accepted plugin on ChatGPT.

PROOF

October 20, 2026 — the full loop, demonstrated live:
the same business directory inside Muse as in ChatGPT;
a call placed by tap; answered from the owner's phone — “Good to go!”;
the conversation continued on a single thread, badged by source.

October 2, 2026 — the network's first organic healthcare inquiry
arrived before healthcare was a target: a clinic, seeking administrative
FAQ and appointment communication.

Not a concept. A working network, looking for its first vertical.

THE HEALTHCARE WEDGE

The front door only — scoped on purpose:
discovery + general and administrative inquiries. No clinical messaging,
no patient health information in the current system.

First practices: independent dental, vision, and small specialty —
the segments Prosper's own announcement names, alongside rural access
and administrative bottlenecks.

Behind the front door, practices keep their systems: scheduling, intake, EHR.
Federal policy is moving the same direction — CMS payer APIs land 2026–2027.

THE FIELD

Zocdoc — a distributed booking channel. $35–$110 per new patient;
now inside Gemini and Amazon Health AI. Closed deals, booked slots.

EliseAI, Hyro, Assort — AI employees for the practice's own front desk.
Phreesia, NexHealth, Luma, Klara, Artera — depth on channels practices own.

None of them sells the practice an open line into every assistant —
a conversation the practice owns, for a flat subscription.
That endpoint is unbuilt. It is what AIWEB is.

BUSINESS MODEL

Free to list. Free to message. The mailbox is the product.

Seller $19.99/mo · Pro $49/mo · Business $500/mo.
Metered AI work on top: drafting replies, preparing quotes,
keeping the listing accurate across AI models.

Healthcare follows the same shape — practice subscriptions,
multi-location groups, later enterprise navigation agreements.

We do not sell patients as leads. The practice owns its relationships.

BOUNDARIES & ROADMAP

Said plainly: AIWEB is not a HIPAA channel today.
No clinical pilot yet. No certifications claimed.

In this program:
1 — Pilot the front door with 3–5 partner practices; measure inquiries, response time, and booked-visit conversion.
2 — Spec the HIPAA-ready tier with compliance guidance: data boundaries, business associate agreements, audit, retention.
3 — Convert pilots into the first paying healthcare customers.

Later: compliant clinical handoffs, payer navigation, provider groups.

WHY PROSPER

Five teams. Healthcare partners who can validate a pilot's scope.
Birmingham — the founder is Mobile-born; Alabama is home ground.

By Premiere Night: live practice pilots, a compliance architecture
a health system can review, and the first paying healthcare customers
on a network that already works.
